e3 Data Loss Prevention

Data Protection without Compromise

Application Scenarios for Data Loss Prevention

Most data loss occurs due to internal or external **employees**, either unintentionally or through malicious intent. **Email remains** the most critical risk channel.

As cloud adoption grows, the web and **cloud** channels are set to become the primary focus. Seamless **collaboration** has made data protection more “inclusive”.

Data discovery depends on identifying what needs protection and how. Is **regulatory** compliance the priority, or is safeguarding **trade secrets** and **intellectual property** the main focus?

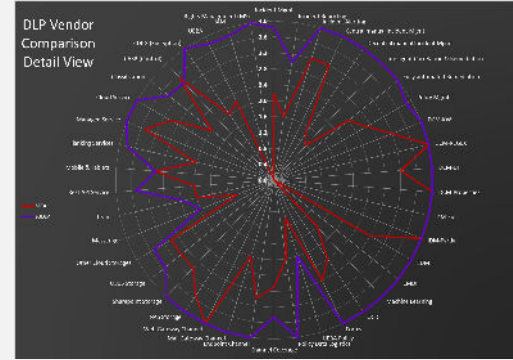

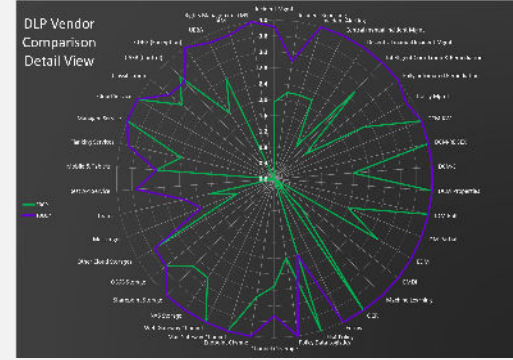

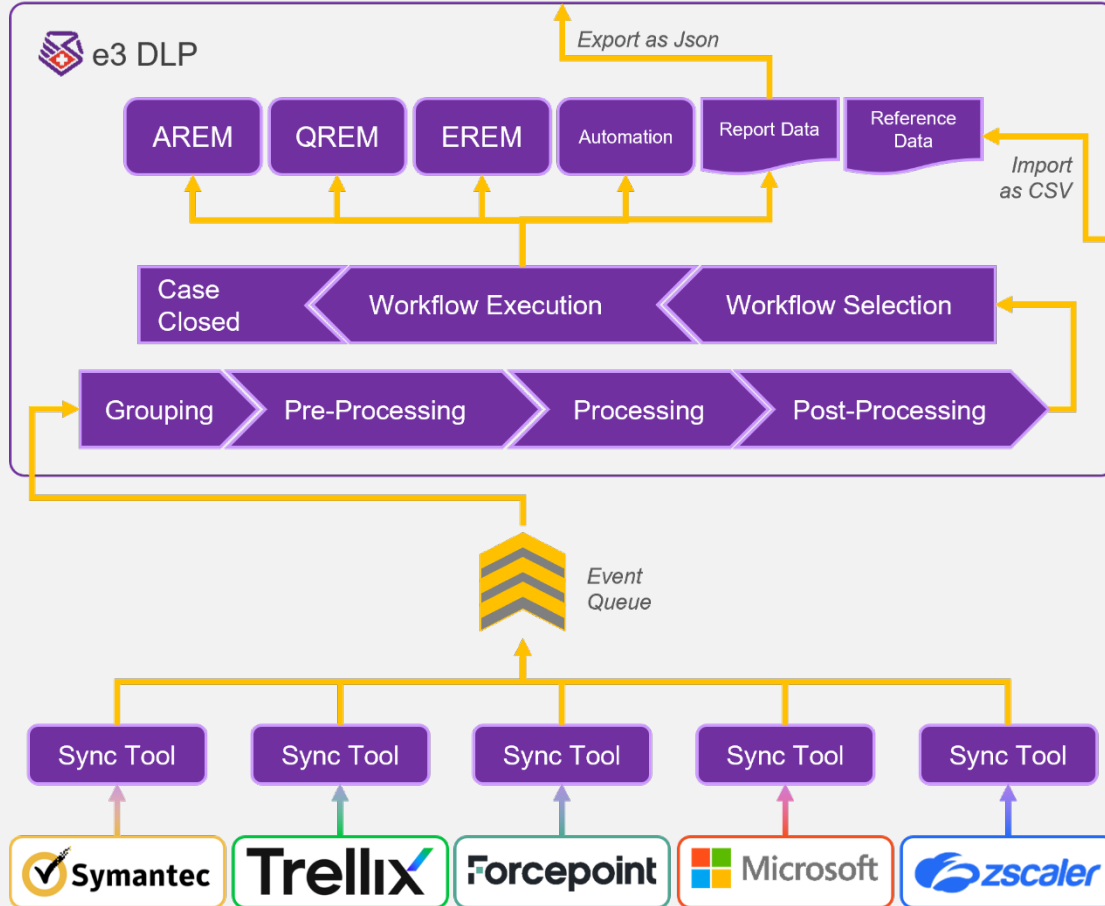

Protecting **client data** remains a priority. The Swiss **Data Protection Law** imposes strict limits on how processors handle personal information.

Effective **incident management** is essential but can be costly. **Optimizing** processes reduces expenses, allowing for precise handling of critical incidents. The more efficiently routine cases are managed, the better critical threats can be assessed – ultimately lowering overall risk.

e3 DLP: Best of five worlds

e3 DLP is a vendor-independent, multi-client capable DLP solution with automated processes.

e3 DLP is based on technology from the top five manufacturers – Broadcom/Symantec, Forcepoint, Microsoft, Trellix/McAfee, and Zscaler – these solutions collectively hold 80-90% of the global market.

e3 DLP modernizes legacy DLP approaches. Traditionally, a single manufacturer covered most needs at high costs. Today, collaborative, cloud-based environments demand flexible combinations of solutions.

e3 DLP is the product of years of experience working alongside market leaders. We understand these solutions in depth and can help you choose the right approach and mix for your specific needs.

e³ e3 DLP = DLP Supercharged

◆ Boosting Efficiency with e3 DLP Automation

Traditional, DLP event processing takes 20–30 minutes.

e3 DLP automates key steps, reducing process time to just 1–10 minutes.

This automation cuts total costs by 50–60% compared to conventional DLP solutions.

As security costs continue to rise, these savings can be reinvested to enhance overall protection.

◆ Enhancing Incident Management with Case Bundling

Most situations involve multiple incidents rather than a single event.

To provide a comprehensive view and enable effective decision-making, e3 DLP groups related incidents into cases. This approach improves assessment accuracy while reducing costs and accelerating processing.

Cases are further categorized – such as payments – allowing for standardized workflows and rule-based processing, ensuring greater consistency and efficiency.

◆ Maximizing DLP Efficiency Through Seamless Integration

Every DLP solution collects and delivers data on employees, customers, organizations, and protected assets. It then processes this data into incidents, evidence, correlations, and statistics.

Sustainable integration reduces IT operational costs, optimizes resource allocation, and enhances protection quality.

e3 DLP elevates integration by offering tailored solutions for each customer.

◆ Optimizing Event Management with an Intuitive UI

In both centralized and decentralized incident management models, a well-designed user interface is crucial.

The UI should display only essential information, enhancing privacy while providing a clear overview of incidents, their status, and actions taken. Options should be presented in an intuitive manner.

By integrating an attribute-based authorization model, the e3 DLP interface overcomes key weaknesses found in most DLP systems.

◆ Future-Proof Your DLP Investments

Process investments are costly, and changes often require reinvestment.

e3 DLP is manufacturer-independent, allowing flexibility to switch or combine solutions without losing existing processes.

This ensures that past investments remain protected, eliminating the need for retraining and significantly reducing future costs.

e3 DLP: A Business Case for Efficiency and Cost Savings

e3 DLP streamlines processes, making them faster, more cost-effective, and easier to manage – especially in incident management.

Comparison to a pure vendor DLP:

e3 DLP	Pure	ESS	PRO
Employees	1,000	1,000	1,000
Minutes / Incident	25	12	4
Incident per Employee / Year	10	10	10
Incident Effort / Year	250,000	120,000	40,000
Remediator Minutes / Hour	50	50	50
Remediator Hours / Day	7	7	7
Remediator Days / Year	220	220	220
Remediator Minutes / Year	77,000	77,000	77,000
FTE's / Year	3.25	1.56	0.52

A fictitious business case for 1,000 employees demonstrates the FTE savings achievable through automation.

Experience shows that **e3 DLP** delivers a *return on investment within 2 to 4 months*.

e3 stands for 20+ years of IT Security Excellence.
We provide future-proof software solutions to protect against cyberattacks and data loss. Our expertise helps companies navigate digital transformation while ensuring data security and regulatory compliance.

By reducing risks and unlocking new opportunities, we enable forward-thinking business models. With a focus on evolving social and technological trends, our solutions are built to tackle tomorrow's challenges.
